Sequence 50, Application US/08560098A

Patent No. 5976841

GENERAL INFORMATION:
APPLICANT: WIENDT, Stephan
APPLICANT: STEFFENS, Gerd Josef
TITLE OF INVENTION: Proteins having Fibrinolytic and
TITLE OF INVENTION: Coagulation-inhibiting Properties
CORRESPONDENCE ADDRESS:
ADDRESSEE: Evenson, McKeown, Edwards & Lenahan
STREET: 1200 G Street, N.W., Suite 700
CITY: Washington
CITY: USA
ZIP.
APPLICANT: KOBAYASHI, MASAKAZU
TITLE OF INVENTION: TISSUE PLASMINOGEN ACTIVATOR
NUMBER OF SEQUENCES: 67
CORRESPONDENCE ADDRESS:
ADDRESSEE: OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT,
                                                                                                                                                                    SEE: P.C.

Patent No. 6593097

GENERAL INFORMATION.

APPLICANT: Xu, Yuan

TITLE OF INVENTION: REVERSE-PHASE HPLC ASSAY FOR PLASMINOGEN ACTIVATORS
FILE REFERENCE: P1788H.

CURRENT APPLICATION NUMBER: US/09/703,695A

CURRENT FILING DATE: 2000-11-01

PRIOR APPLICATION NUMBER: US 60/163,607

PRIOR PILING DATE: 1999-11-04

NUMBER OF SEQ ID NOS: 4

SEQ ID NO 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3 ELHQVP-SNCD----CLNGGTCVSNKYFSNIHWCNCPKKFGGQHCEIDKSKTCYEGNGHFY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61
u-plasminogen activator (EC 3.4.21.73) precursor - chicken
NyAlternate names: upA
CiSpecies: Gallus gallus (chicken)
CiSpecies: Callus gallus (chicken)
CiSpecies: 20-Uul-1990 #sequence_revision 20-Uul-1990 #text_change 16-Jul-1999
CiAccession: A35008
CiAccession: A35008
N. Intle: The Chicken unckinase-type plasminogen activator gene.
A;Reference number: A35005; MUID:90110185; PMID:2295632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              210 CWVLTAAHCFYNPTKKQPNKSVYKVFLGKSILNTNDEHEQVFWYDEIISHPDFTDHTGGN

coagulation factor XIIa (EC 3.4.21.38) - guinea pig (fragment)
NAlternate names: Hageman factor
Cippecies: Cavia porcellus (guinea pig)
Cipate: 25-Fbb-1994 #sequence_revision 03-Aug-1995 #text_change 21-Jan-2000
CiAccession: S28941
Risemba, U1; Yamamoto, T.; Kunisada, T.; Shibuya, Y.; Tanase, S.; Kambara, T.; cabe Risemba, U1; Yamamoto, T.; Xunisada, T.; Shibuya, Y.; Tanase, S.; Kambara, T.; cabe Biochim: Biophys. Acta 1159, 113-121, 1939

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A) Description: activates hepatocyte growth factor by specific proteolytic cleavage A) Pethway: tissue repair and regeneration
C) Superfamily: coagulation factor XII; EGF homology; fibronectin type I repeat homology;
C) Superfamily: coagulation factor XII; EGF homology; fibronectin type I repeat homology;
C) Reywords glycoprotein; by divolase; krindje; liver; plasma; serine proteinase
F) 108-148 Domain: Edpronectin type II repeat homology <1F2>
F) 108-129 Domain: EGF homology <2G1>
F) 245-279 Domain: EGF homology <EG2>
F) 286-367 Domain: kringle homology <EG2>
F) 286-367 Domain: kringle homology <EG2>
F) 373-407 Product: hepatocyte growth factor activator heavy chain #status experimental 

F) 408-655 Product: hepatocyte growth factor activator heavy chain #status predicted

F) 40, 49, 290, 468, 492, 546 Minding site: carbohydrate (Asn) (covalent) #status predicted

F) 40, 49, 290, 468, 492, 546 Minding site: carbohydrate (Asn) (covalent) #status predicted

F) 447, 497, 598 Active site: His, Asp, Ser #status predicted

plasma hyaluronan-binding protein precursor - mouse
C;Species: Mus musculus (house mouse)
C;Accession: JC5878
C;Accession: JC5878
R;Hashimoto, K.; Tobe, T.; Sumiya, J.; Saguchi, K.; Sano, Y.; Nakano, Y.; Choi saiol. Pharm. Bull. 20, 1127-1130, 1997
A;Fitle: Cloning of the cDNA for a mouse homologue of human PHBP: A novel hyal saiol. Pharm. Bull. 20, 1127-1130, 1997
